Test Case:

Add the 3rd item in the Products page to the cart and proceed to checkout (User not logged in)

Preconditions:

1. The user is not logged in to the website.

2. The website https://automationexercise.com is accessible and functional.

3. The user has access to a web browser and can navigate to the Products page.

BDD:

Given user is in home page

And user is not logged in

When user navigates to Products Page

And user navigates to third product's details

And user clicks add to cart button and changes quantity between 1 and 20

Then a modal should be visible that item was added to cart

When user clicks in proceed to checkout in modal

Then user should be redirected to View Cart Page

When user clicks Proceed to Checkout button

Then a modal should be visible requiring register or login to continue with purchase

Expected Results:

1. The user successfully navigates to the homepage of the website.

2. The user is able to open the Products page and see the list of available products.

3. The 3rd product is correctly displayed, and the user is able to click on it to view more details.

4. After clicking "Add to Cart", the product is successfully added to the cart with the specified quantity and a modal should be displayed advising the item was added and a button to continue to checkout.

5. The user is able to access the cart page with the modal link and see the product listed in the cart.

6. When the user clicks "Proceed to Checkout", a modal dialog is displayed prompting the user to register or log in to proceed with the checkout.

Postconditions:

- The product remains in the cart after the user is prompted to register or log in, allowing them to continue once authenticated.

Additional Notes:

- No backend verification of the cart is required for this test case.

- This scenario assumes the user is not logged in, as the modal would not appear for logged-in users.
